

KOL Short Video(Ins) Guideline

Follow this flow:

1. Start with a real use case

(You better make the showcasing videos by yourself. The effect will be much better if you can use your own video. But if you cannot do that, you can use the photos and videos provided on Google Drive.)

Show an online or offline payment scene first.

For example: coffee, restaurant, supermarket, shopping, travel, subscriptions, AI tools, trading tools, or other daily payments.

2. Make the audience curious

Explain that this payment can be done with crypto / USDT, not only with a traditional bank card.

3. Introduce RedotPay naturally

Mention that RedotPay is a crypto Visa card that allows users to spend crypto / USDT online and offline. You can deposit with crypto currency and also fiat money.

4. Explain the benefits with relevant examples

Please localize the message based on your country and audience.

Start with general use cases that are easy for everyone to understand, such as:

- using crypto / USDT for daily spending;
- Binding to Apple Pay / Google Pay for convenient daily payments.
- paying for shopping, food, travel, and subscriptions; (paying for AI tools, SaaS tools, or other online services) **if applicable**

Then, if your audience includes forex traders, highlight the FX-specific benefits:

- Many forex traders receive, withdraw, or manage funds in USDT;
- RedotPay helps traders use USDT directly for daily payments;
- Traders can use USDT for daily spending or transfer it to a local bank for a better price using P2P or send;
- It gives traders a more flexible way to use their USDT beyond wallets and exchanges.

5. End with the offer and CTA

Mention that viewers can get **20% off** by using your exclusive discount code: **[Insert Code]**.
The registration link is in your bio.

End with: **“Use my code [Insert Both Virtual card and Physical card Code] for 20% off.
Registration link is in my bio.”**
